Farm Management

This Farm Management guide reports Kansas land prices and cash rents for 1995-2014. These data may be useful to farm managers in determining cash rental rates, to farmland appraisers in calculating indices for making time adjustments to land prices, and to landowners and investors who base expectations on historical price and rental levels for farmland. The average prices in this guide encompass parcels of land that vary widely in productivity. Additionally, prices are based on survey respondents' estimates of prices, and calculated estimates in some instances, as opposed to actual market sales. Thus, these data are more appropriate for analyzing trends than for establishing market value or rental rates for specific tracts of farmland in a given year.

### Kansas Agricultural Statistics

Since 1976, Kansas Agricultural Statistics Service has collected price information on three types of land: non-irrigated cropland, irrigated cropland, and pasture. This information is combined in two additional land groupings: all cropland and all land in farms. The all cropland land values represent an acreage-weighted average of irrigated and nonirrigated cropland. Although these two groupings do not represent a particular land type (e.g., nonirrigated cropland), they provide a broader classification of interest.

The land value for all land in farms reported here also includes the value of any buildings that may be on the land. The value of the buildings represents a small portion of the total value, on average, and thus this reporting method does not significantly affect the accuracy of land values reported.

For reporting purposes, Kansas Agricultural Statistics Service, has divided the state into nine crop reporting districts. The districts are: Northwest (NW), West Central (WC), Southwest (SW), North Central (NC), Central (C), South Central (SC), Northeast (NE), East Central (EC), and Southeast (SE) (Figure 1). Both land values and cash rents have historically been reported for the crop reporting districts based on statistical surveys compiled at the district level.

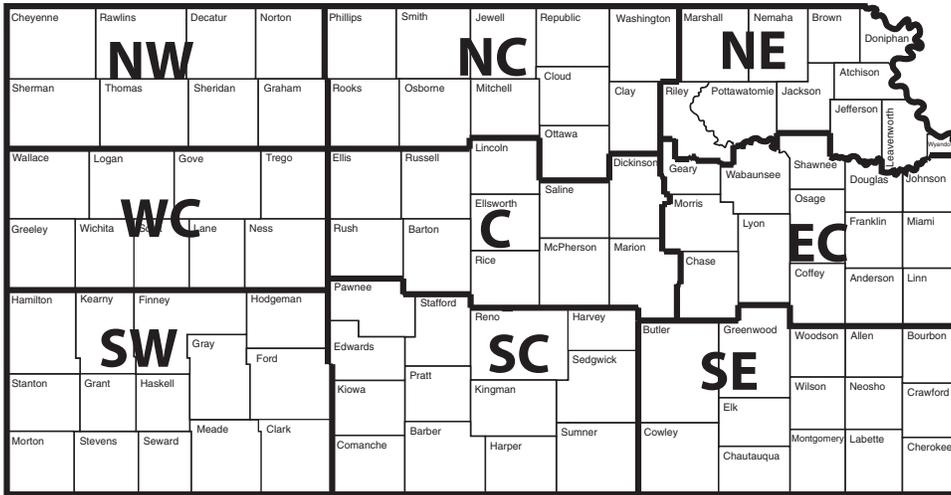

In 2011, KASS discontinued their survey of land values at the district level. Starting in 2011, land values in this publication are only reported at the state level. Previous versions of this publication used estimates based on auxiliary data for district-level values. The current publication provides only data published by the Kansas Agricultural Statistics Service.

### Kansas Land Prices

Tables 1 through 5 show average prices of land (and buildings, Table 1) for each district (in the years available) and for the state for the most recent 20 years. Data are shown for each of the five land groupings: all land in farms, all cropland, nonirrigated cropland, irrigated cropland, and pasture. The annual data are based on a survey conducted by the Kansas Agricultural Statistics Service in June of each year asking for estimates of both January 1 land values and the percentage change in land values from the previous year, as of June 1. When the Kansas Agricultural Statistics Service releases new information, they often revise values from the previous year. Values reported in Tables 1 through 5 represent the most current values reported by the Kansas Agricultural Statistics Service, which includes some revisions for specific regions and years, and thus values reported here will not exactly match previously reported values in this publication.

The lack of information on land values, beyond the state-level estimates from the Kansas Agricultural Statistics Service, necessitated finding alternative data sources for Kansas. The Department of Revenue, Property Valuation Department began providing market-based land sales data in 2012 to the Department of Agricultural Economics at Kansas State University. These data allow for estimates of average land values at the county level for nonirrigated, irrigated and pasture land in Kansas. This report, titled *Kansas County-Level Land Values for Cropland and Pasture*, along with other land buying and leasing resources, is available at: [www.agmanager.info/farmmgmt/land/land\\_buy](http://www.agmanager.info/farmmgmt/land/land_buy)

## Cash Rental Rates

Average cash rental rates for nonirrigated cropland, irrigated cropland, and pasture by region are shown in Tables 6 through 8 for 1995-2014. Cash rent for specific tracts of land is influenced by many factors other than the class of land (e.g., productivity, size of government program payments, location, size of parcel, road access) and thus there will be considerable variability around the average reported rate. It is important to recognize that average cash rents based on surveys reflect both recently negotiated rental rates as well as rates associated with long-term rental relationships. Therefore, while these values may accurately reflect averages being paid, they do not necessarily reflect going market rates for newly rented land.

Table 9 shows average land price per acre, cash rental rate per acre, and rent as a percentage of price (i.e., rent-to-value)

for nonirrigated cropland, irrigated cropland, and pasture in Kansas. The 5-year average (2010-2014) rent-to-value ratios are 2.5 percent, 3.8 percent, and 1.3 percent for nonirrigated cropland, irrigated cropland, and pasture, respectively.

The rent-to-value percentages can be useful guides, but require a word of caution when used. Land values have been increasing faster than rents in recent years due to factors such as low interest rates, high returns to farming and ranching, and other factors within the U.S. economy. Thus, relationships that were observed in the past may not be appropriate in the current market. It is also important to note that these rent-to-value percentages can vary significantly by region due to non-ag influences on land values (e.g. urban development, recreational land use) and other fundamental market factors. Because of this, users of this information may want to calculate comparable values for the specific region they may be considering.

**Footnotes**

<sup>a</sup> Source: Kansas Agricultural Statistics Service (KASS), United States Department of Agriculture.

<sup>b</sup> In their 2011 report, KASS revised state-level land values for 2010 but did not report the corresponding revisions to district-level land values.

K-State revised previously reported district-level values to be consistent with the revision made at the state level.

<sup>c</sup> Data for some of the individual districts were not available.

<sup>d</sup> No irrigated cash rent values were reported in this year, thus the state-level value and all district values were estimated by K-State based on KASS-reported state-level changes for non-irrigated rent in the surrounding years.
